

Give 5 MODELS that use the OSI layers in their own way. For example, TCP/IP model uses the seven layers of the OSI models by putting the session, presentation and application layer into a single one i.e APPLICATION. You have to do your research and find out what other MODELS exist that use the OSI reference model layers in practical implementation. Each model that you give must be explained briefly within one page. This means 5 models, 5 pages.

Assignment deadline is Tuesday 24th, 2015 BEFORE the end of class. Those of you who are looking to submit a soft copy must send it to the CR who in turn would compress all the assignments received and email them to me **BEFORE** the end of class. Those of you who are looking to submit a hard copy must hand them to me **BEFORE** the end of class.

For late submissions, total marks would be deducted for every 3 hours till midnight. After that, no assignment would be accepted regardless of any legit or illegitimate reason. This means, for those students whose lecture ends at 12:45pm, if they do not submit it before 12:45pm, and submit it before 3:45pm, their marking would be out of 8.5 (if total marks of the assignment are 10).

Late submission students would submit the assignment to the T.A.'s. Locating them would be an additional task. For contact details of the T.A.'s, please refer to your CR.
